Constituent DOB:

Constituent Address: , , DE,

Status: Assigned

Case Origin: Web

Referred To: DNREC

Request Type:

Short description: Proposed methane refinery in Seaford, DE

Detailed description:

Haven't we learned anything from the past where dangerous industries are put in areas of marginalized and poor people--People who do not

have the voice or means to speak out. The proposed location for a methane refinery is only one-half mile from a mobile home park. It is immoral to accept children playing near a methane gas production plant that will leak methane as well as ammonia, hydrogen sulfide and nitrogen oxide.

We must demand that, if approved, DNREC and the State of Delaware move this methane refinery to an industrial zoned area, away from vulnerable families and children. This will protect all families and provide the necessary resources to address potential fires and chemical exposure accidents should they occur.
