1. With the increase of electric cars using the roadways, how are you proposing to have them pay for upkeep of the roads they use since that cost mainly comes from gasoline taxes. 2. The addition of all these electric cars are going to put a strain on our electrical distribution system, which will require upgrades which will also be passed on to Delaware ratepayers. 3. Given that the process of mining rare minerals to make electric batteries in other countries in primitive/open pit mines, transport and production of the batteries negates the benefits in CO2 from not using internal combustion engines. How is this better for the environment as a whole? 4. Used gasoline cars and new gasoline cars are far less expensive than EVs, how is this good for low income people?
