Comments:

First let me complement you for staying in the climate change process. Though I don't agree with what you are doing. Our representatives abdicated their responsibilities when they passed SB 305. It was their way of dodging the responsibility for each and every step of the "California Climate Plan". I would feel a little more confident in your low emissions vehicle program if we were producing our own electricity in Delaware or if renewable energy progress was 20 years further down the road. But we import our power from other states (as does California). I hope you use California as the canary in the coal mine and when they fail miserably the state of Delaware will have time to make changes. You can't legislate the people in accepting EV's. If they are the right thing to do then the public will buy them. If not they won't. You will be out of office when this all goes south. I expect that if the Delaware Way is true to form, you will replace Senator Carper. Our County Executive will fleet up to your job, and it keeps on going.... Thanks for listening and good luck. V/R L. A. Snead III
