AM

Kyle,

Can you enter this email into the record for 1140? Thank you!

Angela

Subject: Electric Cars by 2035

Good morning,

I wanted to express my dis-satisfaction with the State of Delaware contemplating the encouragement of purchasing electric vehicles and eliminating the sale of gas/diesel vehicles. I feel the expense is too great to bear on many average income and low income Delawareans both thru purchase (regardless of rebates) and maintenance, let alone the cost of charging these vehicles. Does Delaware even have the power grid to sustain the need between cooling/heating, lighting homes and businesses and now charging these vehicles? Also the cost of replacement of these lithium batteries?

Please do not follow California's path, let Delaware be a leader and fully understand the impact in many ways this could have on the "average" and underserved communities.

Thank you for your time,

Lynne Celia
