Comments:

We need to rethink this issue. Electric cars are not the answer. They are expensive and most of us cannot afford these expensive cars and the cost of putting in the appropriate charger. Then there is the issue of disposal of the batteries that contain toxic chemicals. Do you not realize that every step away from the original source of energy results in less efficiency. Will we all need windmills or solar panels to produce electricity to power these cars? If not then how do you produce electricity for them? Is it coal, oil or gas? Using gasoline to power a car is more efficient than using coal, oil or gas to produce electricity to power a car. Why not make car engines use gasoline more efficiently?
