Comments:

I have no problem with working toward lower emissions, but in a time frame that makes more sense. To mandate by 2050 we will be more prepared. When our infrastructure is in place by replacing all fossil fuel stations. For every gasoline pump we need charging stations. When a full 100% charge from 0% takes maximum 10 mins to fully charge. Charging stations need to be placed on long stretches of highway. Colder climate states need to be charged just as efficiently. The cost of the vehicles need to be competitive to gas engines prices of today. Cars in collisions need to have battery replacements as to not total a vehicle as is commonly done now. Lastly all of the US needs to benefit from this manufacturing of materials and not from other countries. This will be accomplished and be better for our environment but not jammed in for 2035.
