The EV craze is a total joke. Take a minute to think... The Ice Age started 2.4 million years ago and ended 11,500 year ago. So the question is HOW DID THE ICE MELT? There were no cars, no methane production, no coal mining. For the ice to melt the Earth got closer to the Sun and today we are still getting closer to the Sun, hence the warming up of our planet. Educate yourself and take a look at: Milankovitch (Orbital) Cycles and Their Role in Earth's Climate <https://climate.nasa.gov/news/2948/milankovitch-orbital-cycles-and-their-role-in-earths-climate/#:~:text=The%20Milankovitch%20cycles%20include%3A,is%20pointed%2C%20known%20as%20precession.> So, the mandating of the sale of EV vehicles is made by uneducated people who are not seeing the implications of increased demand in electricity. How will this electricity be produced and delivered? We are currently asked to conserve electricity so adding a new source of electric consumption seems totally des-ingenuous. Windmills and solar energy alone will not be enough to satisfy the demand in electricity. If this project is voted in, I see a bleak future for our children and grand children. Imagine shortage of electricity for the consumers having to leave their cars on the side of the road. Electricity will become a monopoly and put more power in the hands of who controls its production and distribution. I understand we need to protect the planet, going all EV will not achieve this goal... PLEASE THINK and don't be sheep following what California does. Our economy will suffer therefore our population will suffer and you will be responsible for the suffering, can you live with that? Pierre Saez 732 208 2432
