Comments:

There is NO WAY our current infrastructure can support (only) electrical vehicles. If this were to occur we would have constant brown/black outs around the country. Where will the electric come from to energize these cars?

Coal/Nuclear? Coal is as big a polluter as oil! What do we do with all the (dead) batteries once replaced? Frankly we need ALL three so that we do not become dependent on only one source of energy. Mandating the purchase of EVs by a certain date is yet another way of our government trying to take control. THAT IS NOT GOING TO HAPPEN!!!

Sincerely, Fred Dawson
