I am against this ruling. Who will pay the cost of installing the charging station at home. What will citizens do who live in apartment complexes? Will the electric grid support the added burden of thousands of charging autos? what will happen in emergencies when power is out? Is the State is already meeting Federal standards, why is this necessary? If all I can buy is an electric car how would I travel across the country where charging stations might not be available? In the event of a hurricane or storm hits Delaware, in the aftermath, how will people be able to insure their safety if the cannot charge their vehicle because the entire system is not operating? This is a very bad idea that more that 73% of Delawareans do nor want. Listen to our citizens.
