Comments:

To DNREC: I read about the The amendment to adopt California's Advance Clean Car II (ACC II) standards for low-emission vehicles and greenhouse gases and add the requirements for zero-emitting vehicles for model year 2027 and beyond. This is an excellent idea and will greatly improve the environment of Delaware and the world. It will help create cleaner air, allow people to have better health, help reduce greenhouse gases, help stop climate change, and improve the environment for all animals and plants. It will help reduce the acidification of the oceans, and help reduce sea level rise. This is important to help protect the future of our world. California standards were adopted in 2010 and went into effect for model year 2014. Since 2010, California has made changes necessary for automobile manufactures to comply. This has helped greatly improve air quality in California and other states. To our legislators: Please approve this amendment ! I know there is a well-funded and well-organized effort by opponents to spread misinformation about ACCII. Please disregard them, they are funded by the Oil Companies and Billionaires, who do not care about the environment, or climate change, or air quality. They only care about profits. thank you, Michael A Figiel Newark Delaware
