First of all let me thank you for the opportunity to share my comments with you in this format.

I do not believe that Governor Carney has the right to MANDATE to the residences of Delaware that a certain percentage of us should be purchasing/driving EVs by the year 2032. Let the market place take that on. If the market place can present to me a vehicle that is of my liking and that I can afford, well that's what I'll purchase. And if your still offering a tax credit on that vehicle, well then maybe I'll buy an EV. But Mr. Carney DON'T TELL ME WHAT TO BUY OR NOT!

Frankly I'm not convinced that the citizens of the United States should be forced into this radical idea by this President. We were 'Energy Independent" a few short years ago in 2021. But now we've been forced into begging for oil from Saudi Arabia and Venezuela, is Iran next. The United State's energy industry is the best in the world. These companies have been protecting the environment for years and would have continued to even better the industry. But President Biden stopped that. Now he wants us to drive EVs and let the rest of the world process the fuels not caring about the worlds environment. So we are made to purchase a vehicle we can't afford while China reaps the benefits of us purchasing (again) minerals for our now much needed batteries. And speaking of batteries, where are they all (some million) going to be berried? I know, along with the non-biodegradable windmill farm blades.

CHINA IS THE ONLY COUNTRY THAT WILL BENEFIT FROM THE UNITED STATES MANDATING EV VEHICLE BY 2032 AND THEY KNOW IT. And Governor Carney we get woker and woker.

Thank you
Prue Garrity
