This new proposal for electric cars in Delaware has not been thought out very well.

More expensive to consumers, infrastructure, grants and rebates? who will foot that bill ? Taxpayers in the end.

Why follow California? that state is a financial disaster.

And if auto emissions account for 30 percent of Delawares pollution, why not attack the other 70percent.

As a lifelong(70) years) Delaware resident , my family strongly opposes this legislation.
