Comments:

I would like to express my support for the mandate that fossil-fuel powered vehicles be phased out by 2035, and replaced by electric vehicles. Climate change is an existential threat to humanity, and this is one major way we can reduce emissions. However, this will only be successful, if the electricity powering those vehicles also comes from sustainable sources (i.e. wind, solar, geothermal, nuclear, hydro-power, etc.). I would also like to see incentives for property owners to install vehicle charging stations. This would include owners of both single-family residences as well as owners of larger multi-family units. Delaware has an opportunity to lead our region on progressive climate policy, and the legislature and governor should not allow the loud, naysaying minority to hinder the movement toward a cleaner and safer environment for all.
