Comments:

I am writing in Support of the Advanced Clean Cars 2 regulations. Climate change is an existential threat to our society. The regulations proposed in the regulations to move towards more EV's is very helpful. It will provide a positive signal to an industry which is already moving in that direction. I think all the disinformation provided by opponents in the public meetings was dangerous. Unfortunately the people speaking against this regulation are the ones that will be harmed most. This is the least that we should be doing and I support this and all other actions that get us to an electrified society. Every fraction of a degree that we can prevent warming is going to help humanity survive, as an En-Roads Climate Ambassador the science and modelling on this subject is very clear. Please register my full and total support for this regulation.
