Comments:

We need to stop burning fossil fuels now. State, federal, and even global regulations to help us to stop burning fossil fuels for all transportation are urgently, critically needed. Despite that we've understood for AT LEAST the past 30 years the reality of global warming, that we are its cause, and that it is an existential threat, we have not only refused to act but we have obstinately, willfully, perversely made it worse. It's like we hate ourselves. Record temperatures, devastating floods, and superstorms are causing death and destruction across the planet but we are failing to cut greenhouse gas emissions fueling the climate emergency. The climate crisis is now, it will only get worse, and it will keep getting worse. We can, however, make it less worse for our children and the inevitable collapsed population of our descendants that we've caused by doing everything we can to stop burning fossil fuels NOW. We WILL stop burning fossil fuels, of course...the question is how: in a managed, and even creative way, or in howling chaos ending in collapse of life on earth. Love Earth As Yourself -- the new golden rule.
