Comments:

I oppose this 'knee jerk' reaction to attempting to regulate 'climate change'. There are other technologies that need more time and research that are better options than electric vehicles, such as hydrogen power, to replace ICE vehicles. Switching to all electric vehicles will put a great amount of stress on an infrastructure that is already prone to numerous faults. we have already seen that California cannot handle the stresses of this switching to all electric vehicles. For individuals that need to travel long distances, it is not feasible to add hours of charging to a work day. This proposal should be left for the voters to decide, not an unelected official.
