I am a resident of Wilmington and am writing to support the Advanced Clean Car initiative (ACC2) for Delaware. Please include these comments for the public hearing April 26.

It is vitally important that Delaware work to reduce greenhouse gas emissions, and gas-powered vehicles are the single largest contributors to these emissions. By adopting ACC2, Delaware will make it possible for us to purchase electric vehicles in our communities, rather than taking our business to other states. This will be good for business, for our auto dealerships, and good for our air, by reducing use of gas-powered vehicles.

ACC2 is sensibly written and good for our community. It will not cause residents to give up their current gas-powered vehicles. Instead, it will encourage us to transition to EVs and hybrids for future purchases. This makes sense and will be affordable to all in our communities.

Please support adoption of ACC2 for Delaware
