Organization: No, just a concerned citizen.

Comments:

To Mandate something, without a plan to improve the grid structure in Delaware. is foolish. Be proactive by providing. More power plants and improving the power distribution network first. Have a plan to finance incentives to provide every homeowner the ability to have an electric panel that could fast charge an EV. To provide a grid strong enough that there would be enough power to provide for all these of these EV's you propose. That would include fast charging stations for drivers along or major highways and the interstate. How do you propose to help our farms Delaware being still 80% agricultural listening to their needs to harvest and transport their crops. This does not sound like the EV industry is up to the task. My final comment, the legislature is the representative. voice of the people. They have been cut out of the process. Even more than the above we still live in a representative. democracy. Whether it be about Gun control, abortion, education, or this issue. They are in place to be the will of the people.
