To: HearingComments, DNREC (MailBox Resources)

For seniors, like myself, EV cars are too expensive to purchase and operate:

Battery degradation is proven; battery replacement is significant cost

Range of EV cars is less than 350 miles; fuel autos range is 500+ miles

Electric grid is unproven; electrical charging is too time consuming and expensive

(CA has already encountered situation where electric grid is insufficient)

Initial cost is far too high Mandates will drive cost higher for EV's and fuel based auto.

When government interferes with "supply and demand", cost to consumer always becomes uneconomical

This MANDATE IS A TERRIBLE IDEA!
