I am writing to state my opposition to this mandate for the following reasons:

Delaware's air quality is impacted by the surrounding states' emissions more than instate emissions. As a small state, how will following CA's mandate affect our air quality without all the surrounding states doing the same? Where is the data?

Government has no business mandating what anyone drives.

Fix the electric grid! The infrastructure is not robust enough to support EVs. The timeline is too short to implement this authoritarian mandate.

There are more compelling reasons to oppose this, but suffice it to say I believe forcing a CA mandate on Delawareans does not make sense.
