Organization: No

Comments:

I oppose this program. While I believe in being a good steward of our planet, history has shown us that the “good intentions” proposed by elected officials, seldom achieves their intended goal. Maybe conduct further research before trying to pass “feel good laws.” A) The current power grid can’t and won’t be able to accommodate all the electric vehicles, even in a small state such as Delaware. B) The process for mining the materials for electric car batteries is more harmful than the omissions released from today’s modern fuel efficient combustion engines. Therefore, if the goal of Delaware’s ruling class is to become more like California, and drive its residents to other states such as Florida, best of luck managing all vacated Realestate the business closures that will follow. Maybe before the state tries regulating cars to combat “climate change,” they should consider regulating the land being destroyed along the Delaware Beaches to build out D.C.’s Sussex County playground with vacation homes, and shopping outlets. Ronald Reagan was right when he said, “The nine most terrifying words in the English language are ‘I’m from the government and I’m here to help.’” Perhaps Joe Biden should lead by example and publicly donate both of his Corvettes,
