The purpose of this email is to state my wholehearted objection to the proposed Delaware Electric Car Mandate. First, I am not convinced that this mandate has been thoroughly thought through to account for second and third order effects on the economy, power grids, impacts to low income people, etc. Moreover I am concerned with apparent government overreach by demanding that industry and consumers be limited to a single option for personal/commercial transportation. I would love to see the cost benefit analysis that shows migration to fully electric vehicles would significantly improve the environment in contrast to the significant cost and other impacts across the state and country.

I do not understand how/why government has become so autocratic. The ends do not necessarily justify the means and the American people want a government that is for the people and not special interest groups.

Thank you for taking my concerns into consideration.
