Comments:

I have been listening to the online presentation, and elected to speak; however, I cannot continue to wait. My comments are: With all the research I have done and studied regarding "climate change," numerous scientists disagree about the validity of " climate change." If it IS a real concern, why does a former President (Obama) have two mansions on two islands (Martha's Vineyard and Hawaii)? Why does the Climate Czar, John Kerry, and all other politicians use private jets for all their travels? Aren't they polluting? We are using a Zoom call, why can't they? The lithium batteries used in these EVs are being made through exploiting children and others worldwide in mining it in hazardous conditions. Lithium is a known flammable pollutant; carbon dioxide is a non- pollutant. It is needed by plants to make oxygen. Lithium entails strip mining and removing it from its ore requires a dissolver. What is used? Toxic sulfuric acid. With China and India causing the most worldwide pollution that is carried throughout the jet stream, what is being done by Delaware and other states to prevent them from polluting us? Who is making these lithium batteries? China. We are selling our souls to countries who hate us. It is unconstitutional for DNREC to be involved with mandating these EVs. Thank you
