Comments:

There is no evidence to show that the current or future electrical grid in DE can support the number of EVs which will need power under this mandate. Every year Delmarva Power requests residents join DPL's program to control limited electric use (higher thermostats) due to DPL's inability to meet CURRENT demand of the summer. Also will our police departments be able to chase down flee cars/ suspects in EV police cars? When route 1 backs up every summer, traffic comes to a standstill. When EVs run out of electric power or batteries overheat, how do these vehicles recover? Finally, it is not JUST fossil fuels that power our cars-what about all of the fossil fuel needed to manufacture tires, seats, and all plastic parts in every vehicle? This mandate is a bad idea!
