### Comments:

The electric car ends up polluting and destroying more of our environment than a gasoline car. This is a fact. The electric car is a fire hazard extreme. During the last few hurricanes coming up the coast, they discovered that when they cars get wet, they explode if they catch fire it's more dangerous for the firefighters to put them out. The product is controlled totally by China. Meaning the batteries. I know that our legislators love taking Chinese money. But China is also the country that is building up for war with us, sending money to their country. Why they're busy taking over and the stabilizing the world from our currency to theirs to destroy America is not what we would actually want. There's new technology and the hydrogen car is going to come out and replace that electric car. On top of that most people have just started discovering electric cars weigh so much more than the regular car directly collapsing parking garage is because of the weight exceeds the limit. We're not even going to discuss that they can't be a fordable. The average person can't even go near it. We're looking at our economy is collapsing everything you're doing is actually hurting the environment and hurting the economy of the people. On top of that this is not even legislators coming up with this . State agency does not have the right to dictate to the people!!! That's why you have elections! So keep pushing the electric car when we the people tell you know. That's called communism. We will not comply with the new mandate and the first thing Hass to go is everybody who pushes the electric car we have elections to fix this! You can always rake the elections that you have. But getting back to the electric car this is something that needs to go. It's fine if a couple people want it but you can't mandate to the people! You'll start to learn this.!!! You work for us and so does every state employee! And it's time to start passing out pink slip if you pass this
