### Comments:

Clean air is an admirable goal. The proposed government mandate, 2022-R-A-0011, is not the proper way to achieve this goal. The electricity needed to charge these vehicles is generated from sources that contribute to air pollution. We should move towards more electric generation from natural gas and nuclear. Nuclear is the best, cleanest and most efficient option to consider for the future of this state. I am on a very limited, fixed income and cannot and will not be able to afford these very costly vehicles. I have to be careful of every dollar I spend on necessities. If electric vehicles are the best option for a consumer then that consumer should be able to have that choice. It must be choice, not a mandate. Government should not be subsidizing a specific product and industry. Tax dollars should be used to support taxpayers, not a specific industry. I am strongly opposed to this dictatorial mandate. Let consumer choice decide the path forward. Governor Carney, please listen to the people, not the socialists that want to have government in complete control of this once great State of Delaware.
