Hello. I am submitting a public comment based on Delaware's plan to ban sales on gas vehicles by 2036.

The article I read in the Middletown Transcript makes the statement that vehicles are responsible for around 30% of the state's gross greenhouse gas emissions. Yet only 0.04% of our atmosphere is CO2 so not sure why this reduction is so important to not allow the free market economy to work and instead pass a law.

How much will this mandate impact the 0.04% in our atmosphere and what will the impact be on the average household in Delaware & to our environment? What should the CO2 in our atmosphere be?

I am all for people that want an electric car, but this should be left up to the free market to decide and not mandated by the government.

Sincerely,
Tony Angotti
