Mandating Electric Vehicles (EV) is a bad idea.

- EVs cost significantly more than gas-powered vehicles.
- EVs are less efficient than gas-powdered vehicles.
- Delaware lacks the grid capacity for EVs.
- Delaware lacks the infrastructure for charging EVs in the City of Wilmington and in Dover.
- EVs are bad for the environment - 500,000 pounds of minerals and rocks must be mined for one EV battery, discarded EV batteries cause water pollution, inhibit the growth and reproduction of aquatic organisms and other potential dangers.
