Comments:

The state does not have the infrastructure in place to handle all electric vehicles by 2035 nor do they realize the costs to all businesses that will need to now install multiple charging stations at their businesses for employees not to mention how are they going to handle malls. What are they going to do with all the batteries in ten years when there is no way of recycling them. Now let's talk about how electric is produced in many states. Fossil fuel. The more electricity we use the more fossil fuel which adds to pollution so where is the clean energy? This is such a bad idea to mandate what kind of car a person can buy. Let the people decide what they want to drive. The cost of a new EV is crazy and will get worse once the mandate goes into effect even though I keep hearing prices are going to drop.
