Comments:

I am against these proposed regulations. We are not ready for this and to place such strict restrictions in such a short time doesn't make sense. What are we going to do when we are told not to charge our cars which has happened in other states? How do people get to work? Additionally, our grid cannot support this and it makes no sense to increase fossil fuel burning to produce energy to charge vehicles. These vehicles have not done well in cold environments and has ended up costing taxpayers more money to charge them, not to mention the ridiculous cost of them. Personally, i cannot afford one and due to the hazards the batteries present, I will not have one in my home. Especially since my garage is under my son's room. How could i ever feel safe charging or storing the EV with him above it? Don't tell me it doesn't happen, check in with Univerisity of Delaware with the fire their malfunctioning EV buses caused. Offer incentives to purchase them or something similar but do not outright ban gas vehicles, it will have severe implications on taxpayers and services within the State.
