Comments:

Give people a choice. EVs are not good for the environment. What about RV fires that are hard to put out. Who can afford an EV? How do we recycle the batteries? Who can afford to replace battery? We rented a Tesla while in AZ. Never again. Had to wait an hour to recharge if we could find a charging station. There is no scientific study that connects gas cars to climate change. What is climate change? No one knows. The climate is just fine. We mine metal used in EVs from countries that use child labor. What about the electric grid? This is the most ridiculous idea there is and in current times there are many to choose from.
