Comments:

I would like to let every elected Delaware politician know that our country and our economy is not ready, willing or able to support this kind of legislation! Our electric grid is unable to sustain the kind of transformation to electric vehicles that is being proposed. At this time, we are unable to support any kind of mass transformation to "low emission vehicles". We already have electric suppliers telling us to cut back of electric consumption at times and now you want to over-burden an already fragile system with more electric consumption! Besides the fact that the electric grid cannot support this, the potential for putting people out of work is enormous! Think about the gas station owners and their employees, the fuel delivery truck drivers, the maintenance people! So many people are going to be affected by the unsustainable, ill conceived, frankly ridiculous proposal. Please, please, please DO NOT pass this or any similar legislation.
