CC: State Rep. Lyndon Yearick

The Department of Natural Resources and Environmental Control (DNREC) is moving forward, even with the overwhelming response from Delawareans objecting to the proposal, to adopt California's Advanced Clean Car II regulation which in essence mandates that only electric vehicles will be the future for Delaware drivers. This Democrat based insanity clearly illustrates that these mindless politicians have one goal in mind and they will do anything to accomplish it. Amongst their major insanities is the fact that contrary to their human race concerns they have no problem fostering child slave labor to mine the critical components needed to manufacture vehicle batteries. In addition, the democrats are aggressively pursuing the use of alternate energy sources, like solar and wind power, components of which are also manufactured, not only by slave labor, but by this countries' most outspoken adversary, all for the sake of a democrat fantasized climate crisis for which they have spent trillions of tax payer dollars to develop studies to formulate policy-based evidence to support their claims rather than evidence-based policies which contradict their claims. Its time for the people to wake up to what is actually going on in our political arena and elect politicians that will support the will of the people rather than try to crush the will of the people
