Comments:

I'm in favor of clean energy and saving our environment, but, I do not believe the towns, states, or federal governments is ready for the change to electric vehicles. I'm sure most americans are not prepared either. Charging stations are not readily available and many homes are not equipped to support an charging system for their vehiicle. Then you have apartment communties and other rental properties where it is going to be difficult to charge an automobile or truck. In addition, the electric grid in this country is not equipped to support charging vehicles. In some areas of the country electricity providers cannot supply the local need for electricity, so, how is the grid system going to handle all the vehicles being charged. Also, how about the safety of the batteries and how much will is cost to replace them? In addition, what is it going to cost to charge an EV?
