Comments:

While it is clear that at some point in time ELVs may come into their need. But, why should we rush out a buy an ELV?

1. The cost to the consumer may seem minimal but, what is the share to the gov't be? How much in subsidies? 2.

Safety of using these Lipo batteries is risky at best. 3. Do we have all the natural resources needed to build the

batteries? I think not. Why would we give up (What was till Biden) anon dependent form of fuel just to become

foreign dependent again. 4. What has been done to ensure that this build process for batteries will be clean. I grew

up near a factory that built special batteries and it is now a polluted area with no clean up in site. Don't put us into

another bad deal.
