Comments:

The real issue here is the feasibility for most DE residents to use EVs. To have to depend on public charging stations presents a serious inconvenience to the drivers due to the availability and reliability of the stations. A much better option is to use a home charger. For an EV the driver will need at least a 40 amp charger in order to charge his electric car in a reasonable time. If the EV owner lives in an apartment building, row house or any house without off-street parking then buying and using a home charging system will be very difficult, or simply not work.
