Do it right. Don't put all your eggs in one basket. Electric and Gas is the answer. America does NOT have the electric infrastructure to go 100% electric. Even now the electric infrastructure is failing. Electric car charging stations get their power from coal burning and gas sources. The batteries are made in other countries and that process is damaging the environment in those countries. Cyber security threats could also cause tremendous harm to our nation if we go 100% electric - the nation could be shutdown. The problem in America today is two extremes. Far left and far right. Those extremes threaten the security of America and democracy. Those extremes fail to understand how to do intelligent analysis and balance risks when choosing solutions.
