Comments:

I think that electric cars are a great thing. But before we are all forced to have them, there needs to be MANY more charging stations, and those need to be fast charges. I can't imagine taking a cross country trip and having to recharge every 400 miles. Having to wait for some time to get to a charger, (when I can find one), then having to wait an hour or more while it charges. I can drive a gas car and not have a problem finding a gas station and taking 5 minutes to fill my tank and be back on the road. If you need low emission why not invest in hydrogen fuel? It wouldn't take any long to fill up a hydrogen tank than a gas tank. It is cleaner, doesn't require energy to make like electricity. You are using water. Split the Hydrogen and Oxygen and you have your fuel and the material necessity for the combustion. Your emission: water vapor.
