

Subject: Citizen/Taxpayer opposition to forced market place of EV

Date: Saturday, May 20, 2023 at 12:50:56 PM Eastern Daylight Time

From: Barbara Carr

To: HearingComments, DNREC (MailBox Resources)

We are Americans and have respect and reverence for our freedoms, up to recently. You are taking advantage of our good nature. You work for us. We do NOT work for you.

I have not heard any reasonable explanations during your meetings by our non elected and “appointed” officials. The DNREC Secretary was NOT present for the meeting in Camden Fire House to address some of the citizens concerns. We are not being represented by constitutional standards!

- The concerns I have are as follows:
- The grid has not been prepared for these additional burdens on our energy grid.
- This is forcing into this market by your tyranny, and not by our choice.
- The batteries are hazardous-vehicle may be more of a hazard in an accident. FD has to stand by to ensure that it does not catch fire for hours after the accident.
- The batteries to be discarded into our landfills or will be responsible to dispose of these dangerous materials.
- The used car market of EVs are deceptive of the anticipated life of the used battery. (if it is fast charged, it lowers the life expectancy of that battery which it not obvious to the buyer of that used EV.
- Charging stations and unpopular EVs are subsidized by us that have older cars or fixed incomes or with working families. We are being forced into this situation, not by our choice.
- The energy to charge these EV is NOT charge to the owner of the EV.
- They do not pay taxes on consumption that pay for our roads, etc.
- Putting the small local family car repair out of business and/or limiting their livelihood longevity.

Have respect for our taxpayer citizens and businesses, the life blood of our state.

Sincerely,

B. Carr

Harrington
