Comments:

I don't understand why everyone wants electric vehicles to be made, and for gasoline powered ones to be not made anymore. Electric vehicles are no better for the environment than gas powered vehicles are or aren't and the reason I say that is because when a battery isn't working in an electric vehicle anymore, where are you going to put it and what impact will that have on the world and the environment in general? Also, the charging stations that you would have to buy for your home are extremely expensive and there is always a chance those batteries could explode which renders the car completely useless and you'd have to buy a new one. People try to tell you that electric vehicles are better and I don't believe it for one second. I don't believe global warming is a thing and I don't believe that gasoline powered vehicles are a problem at all. I don't wanna buy an electric vehicle now, and I never will. I always want my gas powered vehicles, and I don't believe that they will be around forever. That would be a very sad thing. Batteries for electric vehicles are dangerous, no matter how you look at it and truthfully, I think cars powered on water would be much better. Somebody tried to do that years ago and I'm sure the person was eliminated because of that but I think water powered would make a lot more sense.
