I do not at all think this is a great idea. We do not here in Delaware, especially in the southern part of the state have the charging facilities that would be necessary for this. Charging these vehicles at home would be a problem since it would probably require some electrical work to be done. I don't think it could be plugged in a normal house outlet. The cost of these vehicles would be more than gas powered. The electric bills already are quite high, charging cars would make it worse. The electric grid also would be strained, already we are asked to conserve electricity in summer months with all the air conditioning use. More power plants would be needed, adding to more air quality problems. I feel we should let the market take its course, people who want and can afford EVs can buy them, there should be no mandate.
