Comments:

I am opposed to 2022-R-A-0011:Low Emission Vehicle Program. Our electric grid is unable to handle the demand of charging the batteries used in these cars. There would be a worse contamination of the earth in disposing of these batteries. Electric car vehicle fires are impossible to put out and cause a great danger to fire personnel and general public. We would be dependent on China and other foreign countries for raw materials to make the batteries. Climate change is a natural phenomenon of the earth and cars are not the ultimate cause of same. There are not enough charging stations or ability to create enough charging stations due to time needed to charge the batteries. Most people would not be able to afford such cars and such a law would increase the divide between the elitists and the non-elitists. This is a socially unjust law.
