Comments:

I am totally against this low emission vehicle program! We as a state our population are nowhere close to being ready to have electric vehicles shoved down our throats. 1. the electric vehicles cost are way out of my price range and the state picking up some of the bill is unacceptable because you will massively increase taxes to pay for your poor decisions. 2. The battery is a massive hazardous waste disposal, cost that Delaware has no way to keep up when they go past the shelf life. 3. There are no infrastructure in place to deal with all these mandated vehicles, I already seen fights in Shenandoah National Park over the charging stations, there were two Tesla and two general changing stations. How are all the city people living in row homes or ones living within large apartment housing going to charge their electric vehicles. Also our Power Grids are stretched to their limits now, brown outs or asked o reduce our electric power usage during the summer months. 4. I have close friends in Upstate New York who is going through another bout of cancer and I can not even get to his home on a fully charged electric vehicle!! 5. Delaware is a FREE State, not a communist or dictatorship, but rich politicians think they know what I need and they are forcing all Delawareans to their indoctrination and threats. Politicians are overstepping their boundaries dictating laws from California and other left wing bankrupt states, whom are failing, as Delaware will with bad decisions and politicians becoming dictators to the poor people. With his mandate. 6. I can see people moving into he city's because they can't live in the country side because of the electric vehicle mileage short comings. 7. Also the elderly on fixed incomes can't or won't adapt to your mandate and you will isolate them from there best years that they should be enjoying to there fullest extent! v/r Patrick D. McCoy Jr Camden Delaware
