Comments:

EV are the future, they are NOT advanced enough at this time. How do we recycle spent batteries? Is our electric grid able to sustain switching g to EV? How can home owners afford charging stations at their home? How can a person make a long trip for an emergency situation without having g a delay of hours? What is the weight difference between vehicles and combustion vehicles. Finally, how does AAA handle EV that have run out of charge on highways without having g to tow them?
