Comments:

I'm completely opposed to the mandate to outlaw gasoline vehicles now or any time in the future. The economics will eventually lead up to electric vehicles when the prices come into line with the current gasoline vehicles. At that time the conversion will take place on its own. I don't see the necessary infrastructure in place to produce this amount of electric at this time or foreseeable future for the needs of the explosion of EV on the market. Why are we making the foreign powers richer by buying the batteries from all these foreign sources. It looks like the hydrogen power cars will replace all the EV's before their batteries run out. Also climate change is always happening. The earth is currently in its 5th ice age, but nobody says anything about that. The climate change for the ice ages is due to the change in the earth's tilt on its axis not greenhouse gasses.
