I say "No", to the senseless idea that electric vehicles are a good idea! The electric needed now without cars, trucks, etc. The country can't even provide enough power now, especially in California!!!

And I'd Also

I like to make an important remark about the people who are trying to jam this foolish bill through. The people that make up DNREC were "Not VOTED for by the people!!! They do not, and should not be involved in bills such as this. One more interesting concern I'd like to touch on, is what and where are all the batteries going to be trashed! It sure doesn't sound/seem like the State or Federal government realizes they are there for and by the people, and they weren't voted in, to place others in the position to make up crazy bills. The people need to know that we expect the system to operate for and by the people we elected.
