Comments:

The nation, including Delaware, is a long way from a day when technology and infrastructure can effectively support this mandate. Tech shortfalls include combustion risk, battery life, battery range, battery life and battery replacement costs. Infrastructure shortfalls include the obvious lack of public charging sites, increased demand on electricity providers already strapped by existing demand, increased use of fossil fuels required to generate the additional electricity demand, lack of effective battery recycling and disposal sources and many more, I do not object to a well-thought-out plan to increase use of EVs but the proposed timetable is FAR TOO AGGRESSIVE!
