Comments:

Hello, I believe I had previously provided comments; however, I'd like to speak to how other alternative fuel sources, such as hydrogen cells, fit into this mandate. For example, Toyota, a vehicle manufacturer, is looking into hydrogen cell technology, where other than water, a small amount of "exhaust" is released. When we are talking "EV" mandate, is this considering alternate fuels other than electric vehicles? I don't want to rush into a decision that will impact our communities that we will need to roll back in the future. I am supportive of those interested in Electric Vehicles, but also understand why others may be hesitant to adopt the technology. I do hope, over time, prices will decrease. My PHEV was overly expensive and only provides a maximum of 25 miles in the electric mode. The infrastructure needs to be established first before making sweeping changes. Let's walk to the future, not run.
