Comments:

I am a life-long, voting resident of Delaware. In my 55 years of living here, I have survived tropical storms, nor-easters, blizzards and heat waves and the one thing that I have determined is that the electrical grid is stressed and fragile during these natural events and thus, unreliable. There is no way that our electrical grid can handle a flood of EV charging during normal usage, much less during high usage and natural extreme weather events. In several cases during my life, the use of fossil fuels have kept me and my family safe and warm during electrical grid failures and I this becoming more of an issue in the future. Stop forcing the change, that we all know will occur, without government intervention, when the infrastructure and the public determines the time is right. We the people elect officials to debate and hopefully determine the best course of action for the residents. DNREC should never have the authority to inflict such a wide sweeping, life altering, dangerous and business destroying mandate on the tax paying residents of Delaware!!!
