To whom it may concern,

For the life of me I can not recall electing anyone at DNREC to make decisions about what I drive or any other life choices I decide to make!

You do not make laws! That is the business of the Legislature! You only have the power to enforce the laws that pertain to your area of expertise. Stay in your lane!

The notion that these cars are clean is a falshood told by people who will profit from them. Have you ever seen a Lithium mine? Its not pretty.

The amount fossel fuel burned in the mining of Lithium is massive! It takes huge machines that run on Diesel fuel, not butterfly wings and Unicorn farts to get this mineral out of the ground.

For just one EV you have to mine 500,000.00 pounds of the earths crust to get all the minerals for just one EV battery! Thats a whole lotta Diesel fuel being burnt by the earth moving machines.

I wish Delaware would stop trying to copy every bad idea that they see California coming out with. They have destroyed their state, stop trying to destory my state! If EVs were so great you wouldnt have to mandate them! We have not the power grid, infrastucture, charging stations or generating ability for this false savor. You still need Oil, Gas and Coal to fuel the power plants that will charge these things.

And now for safety, ever seen a EV on fire? If salt water comes in contact with your batteries its an instant fire that wont go out until the car melts!

Get into an accident, the battery catches fire, sometime they catch fire when they are charging!

What happens when your stuck in traffic on the interstate with a low power warning and its freezing outside? In closeing, dont force me to buy something I dont want or need, and is not green in any way under the Sun.

Regards,

David Young
